

RS-PW0200 Two Wire Covert Shroud

The ParMarLow RS-PW0200 provides the most covert communications when used with a WR-PWRX06 or WR-PWRX07 wireless earpiece receiver and your radio.

A high sensitivity condenser microphone built into the transducer eliminates the third wire required when separate MiniMike and wired earpiece are used.

The PTT switch is the same rugged overmolded unit used in the Three-Wire Shroud.

Wireless Earpieces Available:

**WR-PWRX06
And
WR-PWRX07**

The ParMarLow WR-PWRX06 and WR-PWRX07 Wireless In-Ear Receivers provide a greater degree of covert surveillance and safety than wired or flex tube style audio speakers.

The PWRX06 operates with the lowest white noise level and the highest signal to noise ratio in the industry. The WR-PWRX07 features Digital Audio Control. This allows for spurious noise filtering and AGC volume control.

If you already use a wireless earpiece, the WR-PWRX06 and WR-PWRX07 will work with your current system and provide improved audio performance.

If you are currently using a wired or plastic tube type receiver, simply replace your speaker earpiece with the ParMarLow Transducer PW-T001. The Transducer uses the same small two pin connector as your wired receiver

WIRELESS EARPIECE ACCESSORIES

WR-PWSLV3 Protective Sleeves (3)

WR-PWPCH1 Storage Pouch

BA-DC230 Zinc Air Batteries

WR-PWACC Wax Guard Replacement Kit
