

### Wireless Interview System

Drop in Charger

Shown above with receiver and transmitter

The ParMarLow Wireless Interview System allows for prompting the Interviewer without interrupting the interview. Now the line of questioning can be directed without alerting the suspect / victim that something they said was of interest. Low Power, QPSK Signal Modulation, 600' LOS (Line of Site) Insures low intercept potential, in house or at a remote location. Used with the ParMarLow WR-RX06 Wireless Earpiece, the suspect / victim is unaware that the interviewer is receiving information from the investigative team. This is extremely valuable when interviewing children and young adults who are very aware of their surroundings.

The WIS-200 Wireless Interview System is bundled with ParMarLow's own wired or wireless earphones to make a reliable low profile prompting system costing less than most law enforcement two way radios.

The complete system as shown, includes a Transmitter, Receiver, 2 Slot Charger, Wireless Receiver, Neckloop and Lapel Microphone.

## WIS-200 Wireless Interview System

Part #		Part #	
FL-MR001	Mini Receiver	WR-RX06	Wireless Earpiece
FL-MT001	Mini Transmitter	MK-CM001	Lapel Microphone
